

NATURE'S LIGHT

**Delivered using Smart Stable Lights
and Award-Winning Light Masks**

www.equilume.com

WHAT IS IT?

The Cashel Light Mask is a rechargeable headpiece that provides the horse with biologically effective levels of blue light to:

- maximise health
- enhance coat condition
- promote muscle development
- positively influence mood, behaviour and overall well-being

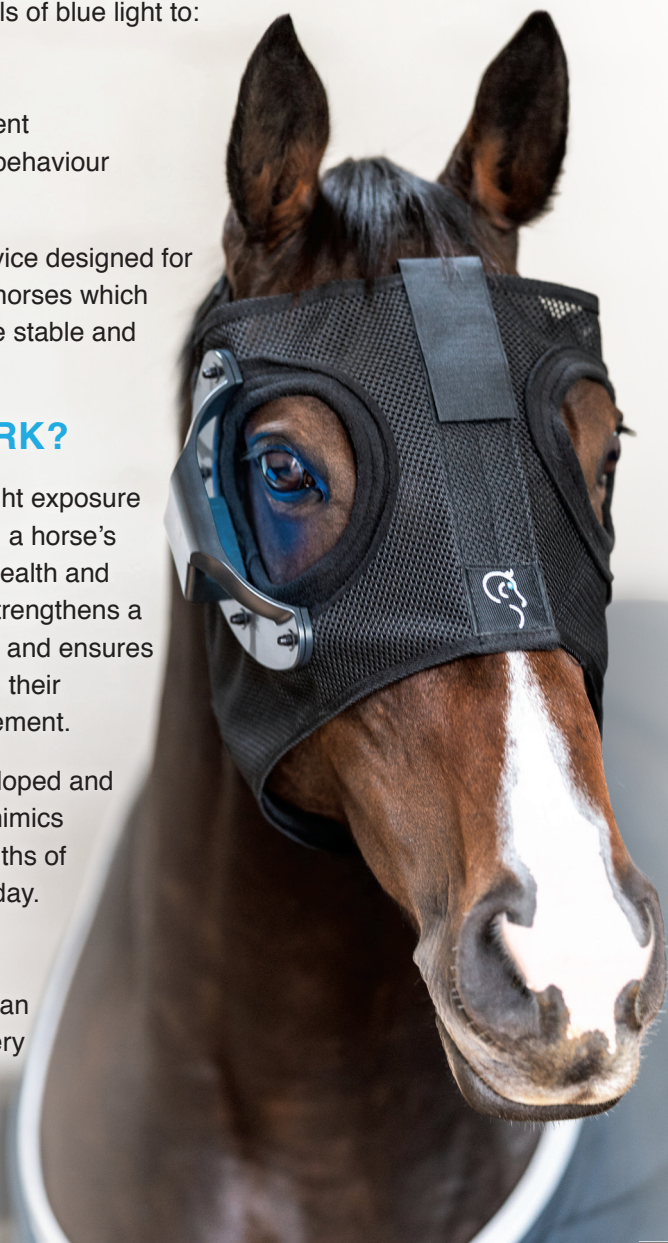

It is a mobile light therapy device designed for both competition and leisure horses which can be used in the field, in the stable and when travelling.

HOW DOES IT WORK?

The quality and duration of light exposure is the most important factor in a horse's environment that influences health and well-being. Correct lighting strengthens a horse's internal body rhythms and ensures they get maximum value from their nutrition, training and management.

Equilume's scientifically developed and tested proprietary blue light mimics the stimulatory light wavelengths of sunlight on a long summer's day.

The timed blue light helps to strengthen the horse's circadian rhythms and ensures that every cell in the body functions optimally, keeping your horse healthy from the inside out.

“We are big fans of the Equilume Light Masks and Stable Lights and I feel that my horses focus more on their work and are healthier and happier overall.”

**Phillip Dutton,
International Event Rider, USA**

“We have had fantastic results for the last few years using Equilume Light Masks. They produce super coats, stimulate muscle development and help to keep the horses relaxed. This simple-to-use hood makes all the difference to producing horses at the top level.”

**Rochelle King-Andrews,
Grand Prix Dressage, AUS**

“I use the Cashel Light Masks as a great alternative to keeping my horses under lights. I find they fit my program well and are a flexible solution when going up and down the road with my horses.”

**Brittany Pozzi Tonozzi,
Dual NFR World Champion, USA**

NEW FEATURES

- PLUG-AND-PLAY DEVICE
- CUSTOMISED LIGHTING SETTINGS
- BLUETOOTH COMPATIBILITY

WHAT IS IT?

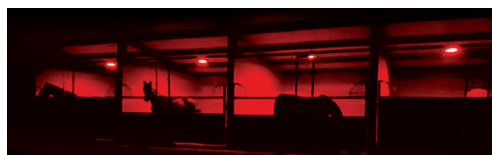

The Equilume Stable Light is a fully automated lighting system that replicates the benefits of sunlight for the stabled horse, providing biologically effective levels of blue-enriched light by day and restful red light at night to:

Performance benefits:

- Enhance coat condition
- Promote muscle development
- Stimulate immunity and healing
- Positively influence mood & behaviour
- Reduce bacteria in stables
- Permit rest & enhance recovery
- Improve overall well-being

Breeding benefits:

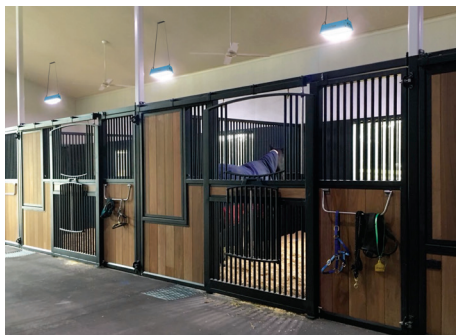

- Advance the breeding season
- Stimulate reproductive activity
- Optimise gestation length

HOW DOES IT WORK?

Scientifically developed and specifically designed for horses, the Equilume Stable Light provides lighting that best reflects and mimics the quality and consistency of light in a natural day-night cycle.

The timed blue light by day helps to strengthen the horse's circadian rhythms and ensures every cell in the body functions optimally, keeping your horse healthy from the inside out. The red light at night allows the nightly rise of melatonin to facilitate rest and recovery.

“

I have noticed the Equilume products have really helped Cooley HHS Calmaria to relax and focus on her work.

My other horses rest and recover better making Equilume an important part of our management programme.”

**Liz Halliday-Sharp,
International Event Rider, USA**

“

Within 30 days of installing the Equilume Stable Lights I noticed significant improvements in my horses' coats. I also noticed a huge difference in the way the horses feel under saddle.

I am convinced that the Equilume Stable Lights are positively impacting my horses.”

**Austin Shepard, NCHA Riders Hall of Fame I
NCHA Futurity Champion, USA**

“

I was amazed at the overall change in the horses after about six weeks under the Equilume Stable Lights, by the condition they were carrying and the way their coats were starting to look. We were quietly surprised at how clean all the throats looked when we scoped them prior to sales. For me, who is sceptical of most things new, I found these Stable Lights to be on the only new technologies that worked really well!”

Eddie Woods, Eddie Woods Stables, USA

WHAT IS IT?

The Curragh and Belfield Light Mask models are headpieces that provide biologically effective levels of blue light to one eye. This technology stimulates summer daylight signals to advance the reproductive period while facilitating flexible management and reducing costs associated with stabling horses.

Benefits include:

- Stimulates early reproductive activity*
- Improves post-foaling fertility*
- Shortens gestations*
- Improves foal maturity*
- Allows horses to live outdoors, minimising stress & encouraging natural behaviour
- Provides flexible management & reduces costs associated with stabling
- Optimises overall mare and foal health

HOW DOES IT WORK?

The Equilume blue light works by controlling production of the hormone melatonin, which influence's when the breeding season starts for horses as well as regulating pregnancy length, foal maturity and other health parameters. By extending daylight hours using blue light, melatonin release is regulated and the horse's reproductive activity can be influenced to coincide with important industry timelines and foal birth dates, while also ensuring optimal health and well-being of breeding stock.

“We have been using the Equilume Light Masks for the past 7 years with great success. Our dry mares are all cycling and covered early, while reducing our management costs significantly. Our pregnant mares that wear the masks foaled on time with excellent post-foaling fertility, especially mares that had previously struggled to cycle with foal at foot.”

Mike Fleming, BHIMA Thoroughbreds, AUS

“We first tried Equilume with a special older mare in 2018. She cycled well early in the season and had two successful embryo flushes before carrying a pregnancy from her third breeding. Convinced by this success, we now use Equilume Light Masks on all open mares. They are easy to use, hold up well in the field and we believe they contribute to our high pregnancy rates.”

**Natalie DiBerardinis,
Managing Director, Hilltop Farm, USA**

“The very best device that I have seen in 25 years of reproduction practice, second only to the introduction of the ultrasound. It will get them bred early.”

William T Gray, DVM, USA
